

CareSupport[®] Wellness Management

Your wellness monitoring solution for Intellectual Disabilities, Assisted Living Facilities, Behavioral Health, Skilled Nursing Facilities, Memory Centers, Home Health, Hospice Care and Correctional Healthcare

caraSolva
Community Care | eHealth Records

Why is Wellness Tracking Cost Effective?

Being pro-active in managing wellness and positive outcomes of those with chronic health conditions elevates your quality of care and results in lower operating costs. The value-priced monthly subscription can be offset as healthier clients are less costly to manage.

An example – the simple act of tracking bowel movements of a client with the propensity for severe constipation using CareSupport's wellness monitoring will result in alerts and scheduled laxatives per your defined protocol well before this condition requires a visit to the ER reducing pain and providing cost savings.

The cloud based technology requires no expensive hardware or licensing. All updates are free of charge.

Alerts add Safety

Text or email alerts are sent within minutes of the time tolerances set in the application allowing nurses to respond quickly to emergencies or critical issues.

Document Quality of Care to Impact Quality of Life

Promoting wellness has become a fundamental objective for successful facilities to impact quality of life. CareSupport® was developed at the request of facilities that found the piles of paper could not readily be turned into actionable data. With CareSupport, all levels of care management have the documentation needed to demonstrate successes as well as understand improvements needed. User's say it's easy to create, monitor and track wellness plans.

Enhance your quality of care by accurately tracking daily life events including behaviors, bowel movements, incidents, ADL's, weight change, sleep, exercise and nutrition with CareSupport®. CareSupport® expands the capabilities of CaraSolva's MedSupport® medication administration software to also monitor wellness of those with chronic health conditions and document outcomes.

CareSupport® Solution

- Electronic health records (EHR) document daily ad hoc activities resulting in real-time trending report of wellness over a chosen period of time
- Touch screen data entry is easy for Caregivers to record events as they happen. CareSupport monitors changes in condition and provides alerts for early intervention which has shown to improve wellness and reduce visits to the ER
- Verification of your quality of care results in successful audits and reduces your risk
- Time spent in the oversight of client care is greatly reduced with reporting and analysis tools allowing time for direct client interaction
- The accuracy of data collected is greatly improved and productivity is increased
- Track health events, incidents, behaviors, ADLs, etc. to individual plans
